Courtney Quinn

Denver, CO — 703-405-8524 — courtney.quinn320@gmail.com — github.com/lemur-cpu — courtneyquinn.dev

SUMMARY

AI software engineer building agent systems, model routing, and local/on-device AI into production products. Full-stack background across React, TypeScript, Node.js, GraphQL, and Python — end-to-end ownership and reliability.

EXPERIENCE

AI Software Engineer **Aug 2026 – Present**
Autonomous Cyber — Offensive Cyber Platform Denver, CO

- Build AI agent systems for security operators on a VS Code–forked desktop product — multi-model chat, local/on-device models, and tool-using agents.
- Shipped task-based AI model routing (opt-in recommendations, offline eval, live scoring); interactive subagents; on-device speech; spend caps across model runs.

Software Engineer I **Jul 2025 – Jul 2026**
Wayfair — Project Shopping Platform Boston, MA

- Owned production features end-to-end across React, TypeScript, Node.js, and GraphQL — collaboration workflows, permissions, and project lifecycle tooling.
- Designed GraphQL APIs and backend services (schema, resolvers, backwards-compatible evolution); added Datadog observability and Cypress/Playwright coverage.
- Supported scaling from 35 to 400+ new users/day and 6,000+ projects in two weeks (+74% WoW), contributing to $42.6M in project-attributed revenue.

Full Stack Software Engineer Intern **Jun – Aug 2024**
Wayfair Boston, MA

- Designed backend APIs for scalable metadata backfill; built internal React/Node tooling adopted by downstream teams.

Software Engineering Intern **Jun – Aug 2023**
Naval Warfare Center — U.S. Top Secret Clearance

- Built SQL storage/retrieval for mission-critical environments; automated ingestion from distributed operational data sources.

Machine Learning Fellow **Apr – Sep 2024**
Break Through Tech AI (Cornell Tech)

- Built and evaluated ML pipelines on real-world datasets using feature engineering and calibration techniques.

PROJECTS

PrecedentIQ — ML Inference and Retrieval Platform

- Full-stack ML system: FastAPI backend, calibrated XGBoost (AUC 0.6735), hybrid retrieval (Qdrant, BM25, rank fusion) over 2,000+ documents.

Boston Logistics Simulator — Geospatial Optimization Platform

- Routing/simulation over an 11,400-node OSMnx graph (sub-1.5s); XGBoost risk scoring (AUC-ROC 0.9982) with SHAP to a React/Mapbox frontend.

Flare — iOS Health Tracking App

- SwiftUI chronic-condition tracker — sub-15s logging, offline-first SwiftData + CloudKit, on-device trends, no backend dependency.

EDUCATION

Virginia Polytechnic Institute and State University — B.S. Computer Science, *Cum Laude* **May 2025**

SKILLS

Languages: TypeScript, JavaScript, Python, Ruby, SQL, Java, C++
Frontend: React, Next.js, SwiftUI, GraphQL, REST, WCAG | **Backend:** Node.js, FastAPI, MCP, async processing
AI & Agents: LLM agents, local models, model routing & eval, speech (ASR), XGBoost, SHAP, vector search
Data & Infra: PostgreSQL, MySQL, Qdrant, Firebase · Docker, SSH/WinRM, CI/CD, Datadog, Cypress, Playwright, VS Code APIs
